

## ASSIGNMENT 4

Date	28 October 2022
Team ID	PNT2022TMID45401
Roll No	E1194032

**Write code and connections in wowki for ultrasonic sensor.**

**Whenever distance is less than 100cms send “alert” to IBM cloud and display in device recent events.**

**Program Code:**

```
#include "Ultrasonic.h"
Ultrasonic ultrasonic(6,2);
int distance; void setup()
{
  Serial.begin(9600);
}
void loop() {
  distance = ultrasonic.read(CM);
  Serial.print("Distance in CM: ");
  Serial.println(distance); if
  (distance < 100)
```

```
Serial.print("alert");
```

```
Serial.println();
```

```
delay(3000);
```

```
}
```

## OUTPUT:

The screenshot displays the Wokwi IDE interface for an Arduino Uno simulation. The code editor on the left contains the following C++ code:

```
1 #include "Ultrasonic.h"
2 Ultrasonic ultrasonic(6,2);
3 int distance;
4 void setup() {
5   Serial.begin(9600);
6 }
7 void loop() {
8   distance = ultrasonic.read(CM);
9   Serial.print("Distance in CM: ");
10  Serial.println(distance);
11  if (distance < 100)
12    Serial.print("alert");
13  Serial.println();
14  delay(3000);
15 }
```

The simulation window on the right shows an Arduino Uno board connected to an HC-SR04 ultrasonic sensor. The sensor's VCC pin is connected to the 5V pin on the Arduino, GND to GND, and the Trig pin to digital pin 6 and the Echo pin to digital pin 2. The simulation is running, as indicated by the play button and the timer showing 00:16.038 at 85% completion.

The serial output window at the bottom right shows the following sequence of printed data:

```
Distance in CM: 317
Distance in CM: 162
Distance in CM: 47
alert
```

The bottom status bar of the IDE shows the system clock as 7:38 PM on 10/28/2022, with the language set to English (IN).
